Subject: RE: Examples of Robotic Program Goals

Thanks for compliment Sean – but it really was Damon and Sean who shined today. There were 5-6 "ah-ha" moments in their presentation where you could tell the steering committee heard eye-opening ideas. They were clearly grateful for their insight and expertise in program rollout and management demonstrated by both Damon and Sean. The clinical team really established themselves as experts today in front of Harrison administration. I am just giving credit where credit is due.

Dave/Glenn, just as an FYI, implementation meeting for Harrison Medical Center was this morning at 0630. In order to get out to the account at that hour it called for a 0400 wake up call for the guys this morning. Both Dave and Damon did a great job with the presentation this morning. The account is off to the right start.

Dave, thanks for a very smooth turnover from the capital to the clinical team. If we continue with this type of collaboration, the Northwest will have a great 2008.

Regards,

Sean O'Connor

- The top administrative objective for the next Robotics Steering Committee (RSC) meeting will be to establish goals for the program to measure ourselves against at 60, 90, 180, 365 day intervals.

To help with your planning, here is the text from our presentation with some example goals from another facility.

We look forward to seeing what your objectives and measurements will be at the next RSC meeting. Thanks

- ✓ Total case volume 32 procedures by year end
- ✓ URO and GYN service using robot by Sept 30th
- ✓ No delays in "to follow" case start times by June 1
- ✓ Average prostatectomy case time at 3 hours by year end
- ✓ Room turnover time between robotic cases (robot case to robot case) at one hour or less by July 30
